Summary

Product Manager focused on solving high-friction problems in credit and lending. Led the development of **India's first spend-based credit card recommendation engine**, driving a **25%** increase in applications with zero marketing spend. 3+ years building fintech products across cards, loans, bank APIs, and B2B2C platforms. Known for rapidly building and validating MVPs independently before scaling with engineering and design teams.

Skills

Product Management: Product Discovery · Funnel Optimization · Experimentation

Data & Tools: SQL · Power Query · Excel · Mixpanel · CleverTap · Figma · Jira

Domain Expertise: Credit Eligibility Systems · Credit Decisioning · Bank API Integration (SBI, Axis) · B2B2C Platforms · Fraud & Dispute Workflows

Rapid Prototyping & MVPs: Cursor · AI-assisted development · GitHub · Vercel · Supabase

Experience

Assistant Manager – Product Management

Aug 2022 – Present

CashKaro.com (BankKaro)

- **Great.Cards:** Identified a discovery gap where users were using the wrong credit cards for the wrong purchase categories, leading to poor rewards realization and low application intent. Built **India's first spend-based credit card recommendation engine**, owning backend logic to map user spend patterns with card reward structures and eligibility rules. Drove a **25%** increase in credit card applications and **2L incremental monthly revenue** with zero marketing spend. Currently live as a pilot on the CashKaro app, with standalone web launch planned.
- **Agent BankKaro:** Built a B2B2C platform to enable offline sales teams to source and punch credit card leads digitally, replacing fragmented manual workflows. Scaled the product by introducing KYC flows, lead tracking, and sub-DSA support, onboarding **2,000+ agents** and improving lead conversion from **6% to 12%** through better lead allocation and incentive design.
- **BankKaro Loans:** Users were matched to loan products they didn't qualify for, leading to high rejection rates. Integrated lenders (Fibe, InCred) and built rules-based eligibility engine aligning income, credit score, and employment criteria. Reduced incorrect product mappings by **70%**, cutting ops rework and improving user trust.
- **SBI & Axis API Integrations:** Owned end-to-end credit card API integrations, defining application flows, status tracking, and failure handling. Worked directly with bank tech and risk teams to align on data contracts and compliance requirements, reducing API failure impact.
- Owned product roadmaps, PRDs, and success metrics across discovery, launch, and iteration phases.
- Improved QA, fraud, and dispute workflows by writing test cases and standardizing exception handling with Engineering, Ops, and Compliance teams.
- *Awards: 2x BankKaro Superstar Award (2022, 2025) for measurable outcomes and cross-functional impact.*

Analyst

Oct 2021 – Mar 2022

Better Mortgage

- Supported U.S. mortgage verification workflows aligned with Fannie Mae guidelines. Created SOPs and validation checklists that improved turnaround by **30%** while maintaining compliance standards.
- Identified process exceptions through QA reviews, forming a foundation for working with regulated lending operations and risk management.

Projects

Airport Lounge Finder

2023

Independently built and shipped a functional MVP using **Cursor and Python**, developing backend scraping logic and a lightweight UI to map lounge eligibility across **200+ airports** by credit card type. Validated demand without engineering or design dependency, reducing lounge-related support queries by **35%**.

Cross-Bank MIS Automation

2023

Automated multi-bank reporting using Power Query, cutting manual effort by **40%** and enabling faster reconciliation and partner performance insights.
